The third in the series of yearbooks by the Association of Mathematics Educators in Singapore, *Assessment in the Mathematics Classroom* is unique as it addresses a focused theme on mathematics education. The objective is to encourage teachers and researchers to include assessment of non-cognitive attributes and to use techniques in addition to paper-and-pencil tests that focus on typical problems. Several renowned international researchers in the field have published their work in the book. The thirteen chapters of the book illustrate evidence-based practices that school teachers and researchers can experiment in their lessons to bring about meaningful learning outcomes. A recurring theme in most chapters is the widely circulated notions of formative assessment and assessment for learning. The book makes a significant contribution towards assessment in mathematics. It is a good resource for research students and a must-read mathematics educators.

The Handbook of Classroom Assessment takes a multi-dimensional approach to classroom assessment. Section II on standardized assessment briefly covers all major standardized achievement tests used in preschool, K-6, and 7-12. Assessment of classroom learning. Section III, presents test instruments and techniques specific to the measurement of math skills, social science skills, and artistic talent across ages and grades. Section IV on classroom practices includes an assessment of general reasoning skills and performance and how to develop a grading philosophy.
