Bates D, Kuperman G, Teich J ... Improved perioperative antibiotic use and reduced surgical wound infections through use of computer decision analysis. Infect Control Hosp Epidemiol.

Education deficit in basic wound assessment can lead to failure to recognize early signs of infection or wound deterioration. Despite many challenges towards wound care, there are potential opportunities to reduce patient injury and clinical outcomes through continuing education. The purpose of this paper is to review literature on current wound care knowledge in nurses and assess existing wound care knowledge in nurses at a skilled nursing facility. A 10-question pre-test wound assessment quiz based on the Bates-Jensen Wound Assessment Tool (BWAT) selected by the Wound Care Coordinator (WCC)/Wound Care Specialist (WCS) was given to 22 nurses: 5 Registered Nurses (RN) and 17 Licensd Vocational Nurses (LVN) working at this SNF. Results showed that only 13% (3) scored higher than 75%. Additional clinical education was provided according to knowledge deficits. A post-test was then given with the same questions as the pre-test. Results showed that 77 percent (17) scored equal or higher than 97%, and 22.7 percent (5) scored 77 percent. There was an increase of 32 percent in correctly answered questions. This shows that education has a significant impact on enhancing clinical knowledge.

Designed for health care professionals in multiple disciplines and clinical settings, this comprehensive, evidence-based wound care text provides basic and advanced information on wound healing and therapies and emphasizes clinical decision-making. The text integrates the latest scientific findings with principles of good wound care and provides a complete set of current, evidence-based practices. This edition features a new chapter on wound pain management and a chapter showing how to use negative pressure therapy on many types of hard-to-heal wounds. Technological advances covered include ultrasound for wound debridement, laser treatments, and a single-patient-use disposable device for delivering pulsed radio frequency.

Wound Care for Nurses—Introduction; Skin Assessment on Admission

Background: Pain is a problem for adults in nursing homes (NHs), especially those with pressure injuries (PrIs). Pain is the most distressing symptom associated with PrI, yet, specific data on the stability of pain over time, ulcer and NH resident characteristics associated with PrI pain, and best assessment methods do not exist. The purpose of this study was to examine severity, stability, and treatment of PrI pain among NH residents. Methods: Data were examined from 33 NH residents with 49 PrIs from four NHs who had a Minimum Data Set assessment completed. Resident characteristics (age, gender, ethnicity/race, Brief Interview for Mental Status score, cognitive status, functional status, urinary and fecal incontinence, and Body Mass Index) and ulcer characteristics (stage, size, location, duration, infection, and Bates-Jensen Wound Assessment Tool [BWAT] score) were obtained from the MDS, medical records and PrI assessments. PrI pain was assessed using a four-point Verbal Response Scale (VRS) and Pain Assessment in Advanced Dementia (PAINAD) three times a day for two days within one week. Data classified as: no, mild, moderate, or severe pain. Pearson correlations, independent t-tests, one-way analysis of variance and multiple linear regressions were used to analyze the data. Results: Twenty-seven participants (82%) reported PrI pain on at least one assessment. Of those reporting pain, 14 (42%) rated pain as moderate or severe. Twelve (40%) reported higher PrI pain levels in afternoon compared to morning and mid-day. Higher PrI pain levels were associated higher cognitive and functional impairment, advanced stage (stage 4, deep tissue injury) PrIs, higher infection and BWAT scores. Seven (21%) participants had analgesics ordered to treat PrI pain. Conclusions: PrI pain should be assessed at various times during the day regardless of PrI stage. PrI pain was reported by most participants and was greater in afternoon. The VRS and PAINAD were effective in PrI pain assessments among participants with varying cognition. Most who received general pain medications reported no PrI pain. Nurses can recognize PrI pain among NH residents with higher PrI BWAT scores, infection, cognitive and functional impairment, which should prompt PrI pain assessment.

CWCA Exam Secrets helps you ace the Certified Wound Care Associate Exam, without weeks and months of endless studying. Our comprehensive CWCA Exam Secrets study guide is written by our exam experts, who painstakingly researched every topic and concept that you need to know to ace your test. Our original research reveals specific weaknesses that you can exploit to increase your exam score more than you've ever imagined. CWCA Exam Secrets includes: The 5 Secret Keys to CWCA Exam Success: Time is Your Greatest Enemy, Guessing is Not Guesswork, Practice Smarter, Not Harder, Prepare, Don't Procrastinate, Test Yourself; A comprehensive General Strategy review including: Make Predictions, Answer the Question, Benchmark, Valid Information, Avoid Fact Traps, Milk the Question, The Trap of Familiarity, Eliminate Answers, Tough Questions, Brainstorm, Read Carefully, Face Value, Prefixes, Hedge Phrases, Switchback Words, New Information, Time Management, Contextual Clues, Don't Panic, Pace Yourself, Answer Selection, Check Your Work, Beware of Directly Quoted Answers, Slang, Extreme Statements, Answer Choice Families; A comprehensive Content review including: Physical Assessment, Epidermis and Dermis, Wound Microenvironment, Hemostasis, Wound Bioburden, Skin Substitutes, Total Contact Casts, Light Reflective Rheography, Management of Burn Injuries, Kennedy Terminal Ulcer, Methods to Measure Edema, Patient Preparation, Bates-Jensen Wound Assessment Tool, Principles of Sterility, Material Safety Data Sheets, Method to Remove a Dressing, Treatment, Compression Therapy, Unna's Boot, Autolytic Debridement, Larval Debridement Therapy, Contamination, Negative Pressure Wound Therapy, Hyperbaric Oxygen therapy, Skin Grafts, Therapeutic Shoe, Patient/Caregiver Education, Proper Positioning of the Patient, Skin-care Tips, Management Strategy, Patient's Quality of Life, Disfiguring Wounds, and much more...

Mobile Health Technologies, also known as mHealth technologies, have emerged, amongst healthcare providers, as the ultimate Technologies-of-Choice for the 21st century in delivering not only transformative change in healthcare delivery, but also critical health information to different communities of practice in integrated healthcare information systems. mHealth technologies nurture seamless platforms and pragmatic tools for managing pertinent health information across the continuum of different healthcare providers. mHealth technologies commonly utilize mobile medical devices, monitoring and wireless devices, and/or telemedicine in healthcare delivery and health research. Today, mHealth technologies provide opportunities to record and monitor conditions of patients with chronic diseases such as asthma, Chronic Obstructive Pulmonary Diseases (COPD) and diabetes mellitus. The intent of this book is to enlighten readers about the theories and applications of mHealth technologies in the healthcare domain.

Originally published in 2001, the Textbook of Palliative Nursing has become the standard text for the field of hospice and palliative care nursing. In this new edition, the authors and editors have updated each chapter to ensure that the content is evidence-based and current references are included. They also have retained the important focus on case studies throughout the text and practical, clinically-relevant tables, figures, and other resources. Like the previous edition, this text has an introductory section of the general principles of palliative care followed by a comprehensive section on symptom assessment and management encompassing twenty-one different symptoms. Other key sections include psychosocial support and spiritual care, providing holistic perspective on care of patients facing advanced disease. The text also includes an innovative section on special populations addressing those most in need of palliative care. The textbook is a useful resource for all nurses with the excellent section on end-of-life care across settings. In this new edition, the pediatric palliative care section has been greatly expanded and includes seven separate chapters on pediatric care. It includes a section on "special issues" addressing topics such as ethical considerations, nursing research, and public policy perspectives and concludes with a section presenting models of excellence including six international models. This edition also offers a narrative on dying based on a spouse's perspective. The text includes an appendix with an extensive list of resources for nurses in the field.

Written by expert clinicians, Core Curriculum Wound Management, 2nd Edition is one of the few nursing texts to offer the basic pathology, physiology and current clinical skills required for high-level wound care. This is essential content for those seeking WOC certification, including nursing students in wound care programs; nurses involved in wound care; nurses in gastroenterology, urology, and surgical nursing; graduate nursing students and nursing faculty.

Preceded by Acute & chronic wounds / [edited by] Ruth A. Bryant, Denise P. Nix. c2012.

Prevent and manage wounds with this expert, all-inclusive resource! Acute & Chronic Wounds: Current Management Concepts, 5th Edition provides the latest diagnostic and treatment guidelines to help you provide quality care for patients with wounds. This textbook presents an interprofessional approach to maintaining skin integrity and managing the numerous types of skin damage including topics that range from the physiology of wound healing, general principles of wound management, vulnerable patient populations, management of percutaneous tubes, and specific care instructions to program development. Written by respected nursing educators Ruth Bryant and Denise Nix, this bestselling reference also provides excellent preparation for all wound certification exams. A comprehensive approach to the care of patients with acute and chronic wounds guides students and health care providers to design, deliver and evaluate quality skin and wound care in a systematic fashion; the comprehensive approach includes the latest advances in diagnosis, differentiation of wound types, nutrition, prevention, treatment, and pharmacology. Self-assessment questions and answers in each chapter help you assess your knowledge and prepare for all wound certification exams. Checklists offer a concise, easy-to-read summary of the steps needed to achieve the best patient care outcomes. Risk assessment scales help in determining a patient's risk for developing a wound, and wound classification tools identify the proper terminology to be used in documentation. Learning objectives at the beginning of each chapter focus your study on the most important content. Principles for practice development boost outcomes and productivity in agencies and institutions, home care, acute care, long-term care, and long-term acute care settings. NEW coverage includes the latest guidelines from WOCN, AAWC, NPUAP, EPUAP, and PPIIA, and the American College of Physicians. New sections cover the prevention and management of biofilm, the new skin tear classification system, MASD and MARCI, CTP terminology and classification scheme, and integration of the Health Belief Model. NEW! Additional full-color photographs show the differential diagnosis of types of skin damage, management of fistulas, and NPWT procedures. NEW! Clinical Consult features help in applying concepts to clinical practice, showing students and health care professionals how to assess, manage, and document real-life patient and staff encounters using the ADPIE framework. NEW two-color illustrations and design make the book more visually appealing.
