Abstract. A practical example of obstacle-induced flow in the atmosphere that constitutes a substantial meteorological measurement problem is the ‘wind shadow’ effect of a meteorological tower on wind velocity in

the lee of the structure. At White Sands Missile Range, New Mexico, a 150-meter tower is utilized to obtain ballistic winds in the lower part of the planetary boundary layer.

Tower shadow effect - Cermak - 1968 - Journal of ...

It is found that there is a change in pressure distribution on the tower due to tower shadow. Also the effects of the interference on the power performance of the wind turbine are discussed. View

“tower shadow” effects from anemometer data is proposed that uses a potential flow solution in the region outside the tower wake, and a Gaussian turbulent wake within the wake. The input data required for the model has been intentionally

Effects of Tower Shadowing on Anemometer Data

effects of tower shadow on blade movement and bending are more important than the effects of, say, periodically reversing gravity loading of the blades (1); however this importance is reversed at multi-megawatt scale.

The Effects of Tower Shadow on the Dynamics of a ...

This experiment investigated the effects of tower “shadowing” on cup anemometer wind speed readings in the wake of common met tower geometries. The objective of this study was to quantify the decrease in measured wind speed with varying wind direction experimentally using full-scale wind facility testing.

Experimental results are validated using a tower shadow model that is based on potential flow theory. The tower shadow model shows a reduction in 3p power oscillations by a factor of 2. Inspec

The effects of tower shadow on the dynamics of a horizontal-axis with turbine - NASA/ADS. Pitot tubes were employed to measure the shadow characteristics of lattice and tubular wind turbine towers in wind tunnel tests. Re of 140-50,000 and wind speeds of 9.13 and 7.40 m/sec were examined. General features of the shadow

- 2D CFD was used to investigate tower shadow effects on both upwind and downwind turbines, and was used to validate the tower shadow models implemented in the aeroelastic code HAWC2.
- Using a streamlined tower reduces the tower shadow by 50% compared to a cylindrical tower. Similar reductions can be achieved using a four legged lattice tower.

steady and turbulent motions, as well as velocity spectra. The tower shadow is investigated in three different ways; using three dimensional physical model scale experiments, steady tower shadow models and two dimensional computational fluid dynamic (CFD) simulations. By use of the tower shadow from the CFD simulations, an artificial increase in blade fatigue loading is seen as the transversal grid is made coarser. Although

But due to the tower's shadowing on the southernmost edge of Harbour Green Park, they had to eliminate six floors in an earlier design, and cut a wedge shape on the top 10 floors in the final design to increase the solar access to the park. Tower shadow effect will cause some adverse results not only for blades but also for tower. Periodical fluctuation force is applied on tower and blade which causes fatigue damage easily. This paper can provide some references for further research about the influence of tower shadow effect on aerodynamic performance.

A model is proposed to remove tower shadow effects from anemometer data using a potential flow solution in the region outside the tower wake and assuming the tower wake is Gaussian and turbulent. An untuned version of the model reproduced the main features of tower-induced flow modification including the turbulent wake, but was not accurate enough to provide a useful correction for wind ...

Modeling of tower shadow effects is essential for design of downwind turbines, which are promising in complex terrains. Present study proposes a new modeling method for tower shadow effects on the basis of load equivalence. It considers aerodynamic interaction between rotor and tower and transient passing through tower wake.
