The Scientific Style and Format Eighth Edition Subcommittee worked to ensure the continued integrity of the CSE style and to provide a progressively up-to-date resource for our valued users, which will be adjusted as needed on the website. This new edition will prove to be an authoritative tool used to help keep the language and writings of the scientific community alive and thriving, whether the research is printed on paper or published online.

Supporting Research Writing explores the range of services designed to facilitate academic writing and publication in English by non-native English-speaking (NNES) authors. It analyses the realities of offering services such as education, translation, editing and writing, and then considers the challenges and benefits that result when these boundaries are consciously blurred. It thus provides an opportunity for readers to reflect on their professional roles and the services that will best serve their clients' needs. A recurring theme is, therefore, the interaction between language professional and client-author. The book offers insights into the opportunities and challenges presented by considering ourselves first and foremost as writing support professionals, differing in our primary approach (through teaching, translating, editing, writing, or a combination of those) but with a common goal. This view has major consequences for the training of professionals who support English-language publication by NNES academics and scientists. Supporting Research Writing will therefore be a stimulus to professional development for those who support English-language publication in real-life contexts and an important resource for those entering the profession. Takes a holistic approach to writing support and reveals how it is best conceived as a spectrum of overlapping and interrelated professional activities Stresses the importance of understanding the real-world needs of authors in their quest to publish Provides insights into the approaches used by experienced practitioners across Europe

This book is a teacher in itself, intended to guide students of tertiary institutions including researchers on one easy way to write papers for submission to a journal. The language used is kept as simple as possible for easy understanding. The book gave a general background to writing scientific research papers, what to consider before starting to write a scientific paper, how to attract other readers to your work and it enables the reader to know the qualities the editors and referees will be looking for in a paper as part of its consideration for publication. It takes each of the main parts of a research paper and looks at what usually goes into them with practical examples. Writing research papers is too wide a field to be able to cover every aspect in one small book. Other books deal in greater detail with other areas of scientific writing especially its technical details. It is not meant to be complete but as a basic introduction. I hope that the book will assist many scientists as they undertake the difficult task of writing their papers for submission to International Scientific Journals. I am delighted to publish this book and make it available to the developing world.
