The industrial fluid flow meters are used to maintain efficiency and help understand profit gains and losses. A flow meter is a device used to measure the mass or volume of a gas or liquid.

Depending on the

Turbine meters are less accurate than displacement and jet meters at low flow rates, but the measuring element does not occupy or severely restrict the entire path of flow. The flow direction is generally straight

through the meter, allowing for higher flow rates and less pressure loss than displacement-type meters.
