Distance formula. The formula for distance, if you know time (duration) and the average speed, is:  $d = v \times t$ . where  $v$  is the velocity (average speed),  $t$  is the time and  $d$  is distance, so you can read it as Distance = Speed x Time. The result will depend on the unit of the speed metric, for example if speed is given in mph, the result will be in miles, if it is given in km/h, the result will be in kilometers.

Excerpt from *Present Lessons From Distant Days* Thus surrounded it is not difficult, by a little use of your imagination, to people those streets with their old inhabitants. It does not seem that it would be a hard thing to hold a conversation with Sallust or Proculus. You are living in the first century rather than in the nineteenth. The door of that ancient life is open for you; you enter and behold it exactly as it was. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Hillary Major. A Glossary of Proper Names and a Selected Bibliography.

"Insightful, instructive, and definitely worth the read."--Greg Andres, Journal of the Royal Astronomical Society of Canada "As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in *To a Distant Day*. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age."--Pangratios Papacosta, Physics Today Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the "wonder weapon" it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that led to Sputnik, satellites, space probes, and--finally--human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, *To a Distant Day* offers a complete and thoroughly compelling account of humanity's determined efforts--sometimes poignant, sometimes amazing, sometimes mad--to leave the earth behind.

The Epic of Gilgamesh is the world's oldest epic masterpiece.

This is the most comprehensive book devoted to Sumatra in more than half a century. It summarizes earlier studies, and provides a huge amount of new knowledge for the first time in readily accessible form. Sumatra is one of the world's largest islands, rich in flora and fauna, minerals and timber, and located at the midpoint of the maritime route between China and India. These are ideal conditions for the creation of a fascinating history. Sumatra has played a major role in world trade for 2,000 years, but its culture and archaeology have been surprisingly neglected. This volume sets out to remedy this defect. With chapters on history, archaeology, anthropology, folklore, and religion, the authors focus particular attention on the relations between the coastal peoples who are best known to outsiders, and the hinterlands, where most of the important resources lie. The list of authors includes most of the principal living authorities on Sumatra. Their cumulative experience consists of many years on all parts of the island. The book is copiously illustrated, and includes a comprehensive bibliography for those who wish to pursue further study of the wide range of topics covered.

Inspector Keon has finally got over the death of his wife Alysha in a terrorist attack five years ago. The illegal AI copy of her - *Liss* - that he created to help him mourn has vanished, presumed destroyed. His life is back on track. But a deadly shooting in a police-guarded room in a high-security hospital threatens to ruin everything. Who got past the defences? Why did they kill the seemingly unimportant military officer

who had been in a coma for weeks? And why did the scanners pick up the deceased man the next day on the other side of the planet, seemingly alive and well? As Keon digs into the mysteries he begins to realise that the death was connected to a mysterious object, potentially alien, discovered buried in ice under the north pole. Someone has worked out what is hidden there, and what its discovery will mean for mankind. Someone who is willing to kill. And another player has entered the game. Someone who seems to know more about Keon than is possible. Someone who might be using Liss's information against him. Or who might be Alysha, back from the dead.
