Lean software development is a translation of lean manufacturing principles and practices to the software development domain.

Adapted from the Toyota Production System, it is emerging with the support of a pro-lean subculture within the Agile community.

The first principle of lean software development from concept to cash development is to eliminate waste. Some obvious forms of waste include time spent building, analyzing, or designing features that won't be used; or time spent supporting software and fixing bugs. But there are sneakier forms of waste
