Probability or chance is how likely something is to happen. If something has a low probability, it is unlikely to happen. If something has a high probability, it is likely to happen. Probabilities...

[What is probability? - BBC Bitesize](#)

Probability is the branch of mathematics concerning numerical descriptions of how likely an event is to occur, or how likely it is that a proposition is true. The probability of an event is a number between 0 and 1, where, roughly speaking, 0 indicates impossibility of the event and 1 indicates certainty.

[Probability - Wikipedia](#)

A number between zero and one that shows how likely a certain event is. Usually, probability is expressed as a ratio: the number of experimental results that would produce the event divided by the number of experimental results considered possible.

[Probability - MATH](#)

Probability and statistics, the branches of mathematics concerned with the laws governing random events, including the collection, analysis, interpretation, and display of numerical data. Probability has its origin in the study of gambling and insurance in the 17th century, and it is now an indispensable tool of both social and natural sciences.

Probability is the likelihood or chance of an event occurring. For example, the probability of flipping a coin and it being heads is $\frac{1}{2}$, because there is 1 way of getting a head and the total number of possible outcomes is 2 (a head or tail). We write $P(\text{heads}) = \frac{1}{2}$. The probability of something which is certain to happen is 1.

[Probability - Mathematics GCSE Revision - Revision Maths](#)

If every possible outcome has the same chance of occurring, the probability of an outcome equals the number of ways the outcome can happen divided by the total number of possible outcomes.

[Finding probabilities - Probability - KS3 Maths Revision ...](#)

Probability is a measure of the likelihood of an event to occur. Many events cannot be predicted with total certainty. We can predict only the chance of an event to occur i.e. how likely they are to happen, using it. Probability can range in from 0 to 1, where 0 means the event to be an impossible one and 1 indicates a certain event.

[Probability in Maths- Definition, Formula, Types, Problems ...](#)

Probability is the likelihood that a given event will occur and we can find the probability of an event using the ratio number of favorable outcomes / total number of outcomes.

[4 Ways to Calculate Probability - wikiHow](#)

Probability theory, a branch of mathematics concerned with the analysis of random phenomena. The outcome of a random event cannot be determined before it occurs, but it may be any one of several possible outcomes. The actual outcome is considered to be determined by chance. The word probability has several meanings in ordinary conversation.

[probability theory | Definition, Examples, & Facts ...](#)

The probability of an event occurring is the chance or likelihood of it occurring. The probability of an event A, written $P(A)$, can be between zero and one, with $P(A) = 1$ indicating that the event will certainly happen and with $P(A) = 0$ indicating that event A will certainly not happen.

[Probability | Definition of Probability by Merriam-Webster](#)

A number expressing the likelihood of the occurrence of a given event, especially a fraction expressing how many times the event will happen in a given number of tests or experiments. For example, when rolling a six-sided die, the probability of rolling a particular side is 1 in 6, or $1/6$.

[Probability - definition of probability by The Free Dictionary](#)

Probability is the study of the mathematics of calculating the likelihood that particular events will happen. the likelihood of something happening or being true: [C] There ' s a higher probability of now having a state income tax (= the tax is more likely now).

In probability theory, a probability density function (PDF), or density of a continuous random variable, is a function whose value at any given sample (or point) in the sample space (the set of possible values taken by the random variable) can be interpreted as providing a relative likelihood that the value of the random variable would equal that sample.
